

MULTI-LEVEL VEHICLE LIGHTS

**FOR:
POLICE, FIRE, SURVEYORS, EMS
CONSTRUCTION, AND TRAFFIC DEPARTMENTS**

ML-4-2S
(Down position)

ML-4-2S
(Up Positon)

Designed first as manual, then later with automatic operation, this unit has prevented more accidents than any of our other products. Used by large police departments for preventing rear end accidents on main highways. With a flip of a switch the warning arms raise far above traffic, to give long range notification of an obstruction or accident. The theory being if a driver has more time to get out of your traffic lane or slow down you will have fewer accidents.

OPERATION: As officer slows down he activates unit which raises arms high above patrol car. Lights flash in alternating pattern with 50% on time giving good depth perception.

CONSTRUCTION: All moving parts are stainless steel and arms are aluminum. Motor is sealed and weather proof. Size: Length - 58"; Width - 14"; Height - 13"; Weight - 58

MODELS AVAILABLE

ML-4	Four Warning Lights (2 on each arm)
ML-4-2S	Four Warning Lights and Two Spotlights
ML-4-STROBE	Four Warning and Strobe in center
ML-6	Six Warning Lights (3 on each arm)
