

WARNING LIGHTS: STACK LIGHTS

PRODUCT
CODE

W

- (A) Stack lights were developed to indicate more than one message at a time in a single fixture. All lenses are made of a 13 oz. unbreakable Lexan plastic.
- (B) These are available up to 4 heads and can be either flashing or steady. Any one lamp can be replaced, without any tools, by removing only the head which has the burned out lamp.
- Bottom of the unit has 3/4" threaded hub attaching to an electrical conduit pipe. They are also available in many different voltages. These are commonly used on machinery to indicate what processes are running. This series starts with the word STACK. An example of a Model would be: STACK-3-120-FL-P-RAB. This would be a 3 head unit, flashing, 120VAC input, pipe mount, with a red top color, amber as middle, and blue as bottom.

Colors available are CLEAR, RED, AMBER, GREEN, and BLUE

- (C) **SERIES-900-WB-DH** - Single or double head units that are mounted on aluminum rainproof boxes. Available with strobe or flashing incandescent lamps. Removable cover allows for easy servicing. Lenses are made of high impact Lexan and use o-ring seals. This double head allows for spare bulb back-up. If primary lamp fails, unit automatically switches to back-up. Also colors can be different to give different messages. This series is available in 6, 12, 24 VDC and 120VAC in either strobe or flashing incandescent lamps.
